NEW: The man who attempted to kill Supreme Court Justice Brett Kavanaugh identifies as a **transgender woman** and was deeply mentally ill and suicidal, according to documents first obtained by @realDailyWire. Details below:

"There are no conspiracies, but there are no coincidences."?

In hindsight this is a very interesting quotation.

So we all just 'blindly' trust X StarShield?

From Wikipedia, the free encyclopedia

Starshield is a business unit of [SpaceX](#) creating purpose-built [low-Earth-orbit](#) (LEO) satellites designed to provide new military space capabilities to U.S. and allied governments.^{[1][2][3][4]} Starshield was adapted from the global communications network [Starlink](#) but brings additional capabilities such as target tracking, optical and radio reconnaissance, and early missile warning.^{[5][6][7][8]} Primary customers include the [Space Development Agency](#) (SDA), [National Reconnaissance Office](#) and the [United States Space Force](#).^{[5][9][10]} As of 2025, at least 183 Starshield satellites have been launched, with the latest batch of 22 satellites being launched in April 2025 as part of [NROL-145](#).

As [Starlink was being relied on in the Russo-Ukrainian war](#), expert on battlefield communications Thomas Wellington argued that Starlink signals, because they use narrow focused beams, are less vulnerable to interference and jamming by the enemy in wartime than satellites flying in higher orbits.^[25] Although there is no lethal weapons being developed this technology is being used by the military and it "can be integrated onto partner satellites to enable incorporation into the Starshield network."^[26] Therefore, if the military needed the use of SpaceX satellites through the Starshield program SpaceX "currently has over 3,000 satellites in low Earth orbit that beam the signal back to users' receiver dishes."^[27]
